random heterogeneous materials microstructure and macroscopic properties 2nd printing

random heterogeneous materials microstructure and macroscopic properties 2nd printing In mathematics and physics, homogenization is a method of studying partial differential equations with rapidly oscillating coefficients, such as \( \varepsilon^2 \partial_t \varepsilon \partial_x \) where \( \varepsilon \) is a very small parameter and \( \partial_t \) is a 1-periodic coefficient: \( (\partial_t + \partial_x) = (\partial_t + \partial_x) = \ldots \). It turns out that the study of these equations is also of great importance in physics and engineering, since equations of this ...

random heterogeneous materials microstructure and macroscopic properties 2nd printing Dual-phase steels (DP steels) consist of ferrite and a dispersed hard martensitic second phase in the form of islands. Usually they are low-carbon low-alloy materials with 10-40 vol.% hard martensite or martensite-austenite particles embedded in a ductile ferrite matrix. As they combine high strength and good formability at low production costs they are widely used for automotive applications.

random heterogeneous materials microstructure and macroscopic properties 2nd printing Avizo (pronounce: a-VEE-zo™) is a general-purpose commercial software application for scientific and industrial data visualization and analysis. Avizo is developed by FEI Visualization Sciences Group and was originally designed and developed by the Visualization and Data Analysis Group at Zuse Institute Berlin (ZIB) under the name Amira. Avizo was commercially released in November 2007.
